

Dear Dean Lane of Graduate Studies,

I am submitting this petition to respectfully request consideration for the transfer of additional graduate credit hours toward my Master's degree in Computer Science.

I was recently admitted into the Computer Science graduate program within the Department of Engineering, and I am excited and dedicated to continuing my education at the graduate level. During my undergraduate studies, I participated in the 4+1 program, which allowed me to begin taking graduate level courses early and apply up to 12 credit hours toward both my Bachelor's degree and future Master's degree.

Due to an oversight, I completed more than the standard 12 graduate credit hours associated with the 4+1 program. In total, I completed 7 graduate courses and 2 colloquium courses, totaling 23 graduate credit hours. Two of those courses (S:25 CS529 and F:25 CS510) counted towards my shared credit. The remaining 5 courses and colloquiums were taken in this order: Fall 2025 – (CS592, CS530, CS542) and Spring 2026 – (CS592, CS506, CS580, CS591)

Since these courses were relevant towards my graduate degree, I am respectfully asking if these additional courses can be accepted and applied toward my Master's degree requirements. If accepted, it would allow me to complete the remaining requirements for my Master's degree and graduate in the next semester, Fall 2026.

I understand that this request involves an exception to the usual credit limit, but I hope the unique circumstances of my case can be considered. Thank you for your time reviewing my petition. I would be grateful for the opportunity to have these additional credits transfer toward my graduate degree.
